WORK EXPERIENCE

Freelance Full Stack Developer | International Clients January 2026 – Present

Working as a Freelance Full Stack Developer, I have been developing and maintaining web-based solutions for international clients across e-commerce and digital marketing domains. My responsibilities include designing scalable backend architectures, developing secure APIs, managing databases, integrating third-party services, and delivering end-to-end web applications tailored to client requirements.

I have led the development of projects such as AyitiBook, a multi-vendor e-commerce platform for a Dominican Republic client, and Peyebouste, a digital marketing platform for a Haiti-based agency. My work involves building robust backend systems using Laravel, PHP, Python, and MySQL, implementing role-based access control, automating business workflows through scheduled tasks, and integrating external platforms such as Meta Ads APIs for campaign management and reporting.

These projects have strengthened my expertise in full stack development, database design, API integration, cloud deployment, and software architecture. Working directly with clients has enhanced my communication, project management, and problem-solving abilities while enabling me to deliver scalable, business-focused solutions in real-world environments.

Full Stack Web Development INTERN I ASDN Cybernetics Inc. I May 2025- July 2025

During my internship at ASDN Cybernetics Inc., I worked as a Full Stack Web Developer, independently developing multiple live web applications under professional guidance. I designed, developed, and deployed an Employee Management System and a Vulnerability Scanner platform, both of which are still actively used within the organization.

My responsibilities covered the complete development cycle — from planning database structures and backend logic using PHP and MySQL to building responsive front-end interfaces with React, HTML5, CSS3, Tailwind CSS, and Bootstrap. I implemented secure data handling, user authentication, and efficient workflow automation to improve system reliability and performance.

The experience strengthened my understanding of full stack development, API integration, and database management while enhancing my problem-solving and project ownership skills. Working closely with mentors and teams, I learned to deliver scalable, user-focused web solutions aligned with real-world business needs.

PROJECTS

Peyebouste Marketing Platform | View Project April 2026 – June 2026

Developed a scalable marketing automation platform for a Haiti-based advertising agency using PHP and Python. Integrated Meta Ads APIs to enable clients to create, manage, and track advertising campaigns directly from the website. Built an AI-powered chatbot for customer support, implemented automated cron jobs for campaign processing and status synchronization, and developed reporting features for real-time performance monitoring. Conducted research on Meta Ads optimization and audience targeting to improve campaign effectiveness and platform efficiency.

AyitiBook E-Commerce Platform January 2026 – Present

Developing a large-scale e-commerce platform for a Dominican Republic client, responsible for designing and implementing the complete backend architecture and database system using Laravel. Built a scalable foundation to support multiple user roles while ensuring security, performance, and maintainability across the platform.

Created dedicated portals for customers, sellers, affiliate marketers, administrators, and delivery partners, each with role-based access control and tailored functionalities. Implemented core e-commerce features including product management, order processing, user account management, seller operations, affiliate tracking, and delivery workflow management.

Designed the system to support future scalability and seamless integration of additional business modules. This ongoing project is streamlining online commerce operations and delivering a comprehensive digital marketplace solution for multiple stakeholders.

Employee Management System I View Project June2025- June2025

Developed a **full-stack web application** to automate **employee data, attendance, and payroll management**, significantly improving operational efficiency and reducing manual workload. Implemented **secure authentication** and **role-based access control** to ensure data integrity and administrative transparency.

Built comprehensive **CRUD functionalities** for both admins and employees, enabling seamless data updates and performance tracking. Designed a **responsive, user-friendly interface** using modern front-end frameworks to ensure accessibility across all devices. Integrated **automated reporting** and analytics modules, empowering management with real-time insights into workforce performance and attendance trends.

This project enhanced organizational efficiency, minimized human error, and provided a scalable digital solution for centralized workforce management.

Vulcan-Security Headers Scanner I View Project June 2025- July 2025

Developed a **lightweight web security scanner** designed to **analyze HTTP security headers** and detect potential web vulnerabilities, strengthening overall application security. Implemented **email-based OTP authentication** for secure user access and **live target validation** to ensure accurate and reliable scans.

Engineered **automated scanning modules** to identify misconfigurations in critical headers such as **CSP, HSTS, X-Frame-Options, and XSS Protection**, enabling quick detection of common security gaps. Delivered **comprehensive vulnerability reports** highlighting **severity levels, technical insights, and actionable remediation guidance**, empowering developers to fortify their applications effectively.

This project enhanced awareness of secure web practices and contributed to **improving system reliability and user trust** within web applications.

Vulcan-Pro Advanced Vulnerability Scanner I View Project July 2025-September 2025

Built a **full-stack vulnerability scanning platform** that integrates multiple open-source security tools like **Nmap, Nikto, SQLmap, and WhatWeb** to deliver **comprehensive application and network security testing**. Implemented **real-time scan visualization**, **severity-based reporting**, and **secure user authentication** using **email OTP verification** for controlled access.

Optimized performance with **fast response times** and developed an **automated output parser** to generate **clean, structured, and easily readable results** for both technical and non-technical users. Integrated **professional PDF reporting** with detailed remediation insights, combining backend logic in **PHP and Express** with a **React and Tailwind CSS frontend**, and a **MySQL database** for efficient data handling.

This project enhanced the **efficiency, clarity, and accessibility** of vulnerability assessment workflows, providing organizations with a **streamlined and reliable tool for proactive security management**.

SKILLS SUMMARY

- Languages: HTML, JavaScript, SQL, PHP, C, C++, CSS, TypeScript, Python
- Frameworks: Bootstrap, Tailwind CSS, React.js , Laravel
- Tools: Composer, NPM, Git, XAMPP, RESTful APIs, JSON
- Platforms: XAMPP, Github, Visual Studio Code, Netlify, Vercel , Google Cloud Console , Aapanel
- Soft Skills: People Management, Problem Solving, Excellent communication, Team Collaboration, Time management, Adaptability, Attention to Detail

EDUCATION

University Of Kota — Kota, India
Integrated Master of Computer Application; GPA: 7.46 — August 2023 - August 2028

Global Public School — Kota. India
Senior Secondary Education, Mathematics; GPA: 7.90 — March 2021 - March 2023

ACHIEVEMENTS & VOLUNTEERING

• Developed and deployed full-stack web applications (*Vulcan Pro* and *Employee Management System*) actively used in professional environments.
• Recognized for technical innovation and practical implementation in CyberSecurity and management systems.
• Volunteered in the **Personality Development Workshop (PDC)** by ISKCON, enhancing leadership and communication skills.
• Served as **Event Organizer** for **Tech Fest** and **Cultural Fest** at the University of Kota, managing event operations and coordination.
• Received a **Trophy of Appreciation** for outstanding contribution and successful event organization.
